There is disclosed an anti-glare and anti-reflection film, which has a transparent support, and at least one low-refractive-index layer that comprises a fluorine-containing resin and has a refractive index in the range from 1.38 to 1.49, wherein the film comprises an anti-glare layer that is disposed between the support and the low-refractive-index layer and that contains a binder having a refractive index in the range from 1.57 to 2.00. The anti-glare and anti-reflection film, which has sufficient anti-reflection property, resistance to damage, and stain-proofing property, and free from uneven color, can be produced simply and inexpensive manner. There is also disclosed a polarizing plate and an image display device, each utilizing the anti-glare and anti-reflection film.
